                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 1, Application US/07780081

Patent No. 522936

GENERAL INFORMATION:
APPLICANT: TSUKADA, Yoshihisa
APPLICANT: ORIKASA, Atsushi
TITLE OF INVENTION: PEPTIDE-CONTAINING POLYETHYLENE GLYCOL
TITLE OF SEQUENCES:
INVERS
Sequence 80, Application US/09455061

Patent No. 6329190

GENERAL INFORMATION: Thomas J.

APPLICANT: Roelvink, Petrus W.

APPLICANT: Kovedi, Interesting Denovirus WITH USE OF TITLE OF INVENTION: CONSTRAINED PEPTIDE MOTIFS

TITLE OF INVENTION: CONSTRAINED PEPTIDE MOTIFS

TITLE OF INVENTION: Voit & Mayer, Ltd.

STREET: Two Prudential Plaza - 49th Floor

CITY: Chicago

STATE: Illinois

COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Length 7;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Indels

Patent No. 5521067
GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Bone Marrow Cell Adhesion Molecules and
TITLE OF INVENTION: Process for Detecting Adherence Between Cell Adhesion
TITLE OF INVENTION: Molecules and Cells Generally
NUMBER OF SEQUENCES: 1
CORRESPONDENCE ADDRESS: 1
CORRESPONDENCE ADDRESS: 3
ADDRESSEE: Mixon, Hargrave, Devans & Doyle
STREET: Clinton Square, P.O. Box 1051
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

Patent No. 5558874
GENERAL INFORMATION:
APPLICANT: Clark, Richard A
APPLICANT: Gailing, Doris
APPLICANT: Gailin, James
TITLE OF INVENTION: EXCOMBINANT FIBRONECTIN-BASED
TITLE OF INVENTION: EXTRACELLULAR MATRIX FOR WOUND HEALING
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
ADDRESSEE: Jaeckle Fleischmann & Mugel, LLP
STREET: 39 State Street
APPLICANT: Roelvink, Petrus W.
APPLICANT: Roelvink, Petrus W.
TITLE OF INVENTION: TARGETING ADENOVIRUS WITH USE OF
TITLE OF INVENTION: CONSTRAINED PEPTIDE MOTIFS
NUMBER OF SEQUENCES: 80
CORRESPONDENCE ADDRESS:
ADDRESSEE: Lapoping, Voit & Mayer, Ltd.
STREET: Two Prudential Plaza - 49th Floor
CITY: Chicago
STREET: Illinois
COUNTRY: USA
ZIP: 6067.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           US-08-453-378-2

Sequence 2, Application US/08453378

Patent No. 561646

GENERAL INFORMATION:

APPLICANT: Salmi, Marko

APPLICANT: Salmi, Marko

APPLICANT: Salmi, Marko

APPLICANT: Jalkanen, Sirpa

TITLE OF INVENTION: Compositions And Diagnostic Methods

TITLE OF INVENTION: Using Monoclonal Antibodies Against CD44v6

NUMBER OF SEQUENCES: 11

CORRESPONDENCE ADDRESS:

ADDRESSES: Sterne, Kessler, Goldstein & Fox

STRET: 1100 New York Avenue Suite 600

CITY: Washington

STRET: 1100 New York Avenue Suite 600

CITY: Washington

STRET: 1100 New York Avenue Suite 600

COUNTRY: U.S.A.

ZIP: Z0005-3934

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

OPERATION SYSTEM: PC-DOS/MS-DOS

SOFTWARE: PatentIn Release #1.0, Version #1.25

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Alan William John
No. 5628979el Reagent For Tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CURRENT APPLICATION DATA:
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/07/990,296
FILING DATE: 19921210
CLASSIFICATION: 514
ATTORNEY/AGENT INFORMATION:
NAME: Kowalchyk, Alan W.
REGISTRATION NUMBER: 31,535
REFERENCE/DOCKET NUMBER: 600.252-US-01
TELEPHONE: 612-332-9081
INFORMATION FOR SEQ ID NO: 4:
SEQUENCE CHARACTERISTICS:
LENGTH: 25 amino acid residues
TYPE: AMINO ACID
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   0; Mismatches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence 5, Application US/08483077C

Patent No. 5811391

GENERAL INFORMATION:
APPLICANT: Tempczyk, Anna
APPLICANT: Tempczyk, Anna
APPLICANT: Tempczyk, Anna
APPLICANT: Tempczyk, Anna
APPLICANT: Zheng, Zhong-Li
TITLE OF INVENTION: Cyclic CS-1 Peptidomimetics,
TITLE OF INVENTION: Cyclic CS-1 Peptidomimetics,
TITLE OF INVENTION: Compositions and Methods of Using Same
CORESPONDENCES: 33
CORESPONDENCE ADDRESS:
ADDRESSEE: Campbell & Flores LiP
STREET 4370 La Jolla Village Drive, Suite 700
CITY: San Diego
CITY: San Diego
CUNTR: California
COUNTR: United States
ZIP: 92122
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
COMPUTER: PatentIn Release #1.0, Version #1.25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

Patent No. 5958874
GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Clark, Richard A
APPLICANT: Grailing, Doris
APPLICANT: Gailit, James
TITLE OF INVENTION: EXCOMBINANT FIBRONECTIN-BASED
TITLE OF INVENTION: EXTRACELLULAR MATRIX FOR WOUND HEALING
NUMBER OF SEQUENCES: 12
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                100.0%; Score 23; DB 2; Length 25; 100.0%; Pred. No. 26;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ADDRESSE: Jaeckle Fleischmann & Mugel, LLP
STREET: 39 State Street
